

1 **ABSTRACT OF THE DISCLOSURE**

2 An adhesive strip (10) for suspension is made of flexible material and comprises
3 a base plate (11), at least one fin (12) formed on the base plate (11) and an adhesive layer
4 coated on one side of the base plate (11). The adhesive strip (10) can be easily divided
5 into pieces and attached to flat surfaces or objects respectively, wherein the fins (12) of
6 two paired adhesive strips (12) face in opposite directions and are complementary when
7 engaged with each other. Whereby, the objects are suspended on the surface at a desired
8 place and easily removed if the objects are wanted.
